Monotone Sequences

Monotonically Increasing Sequence

A sequence $\{a_n\}$ is said to be **monotonically increasing** if for all natural numbers n, the terms of the sequence satisfy the inequality

$$a_n \leq a_{n+1}.$$

Monotonically Decreasing Sequence

A sequence $\{a_n\}$ is said to be **monotonically decreasing** if for all natural numbers n, the terms of the sequence satisfy the inequality

$$a_n \geq a_{n+1}.$$

Monotone Convergence Theorem (MCT)

Monotone Convergence Theorem

If a sequence is monotone and bounded, then it converges.

Problem

Prove that the sequence defined by $x_1 = 3$ and

$$x_{n+1} = \frac{1}{4 - x_n}$$

converges and find the limit.

Problem

Prove that the sequence defined by $x_1 = 1$ and

$$x_{n+1} = 4 - \frac{1}{x_n}$$

converges and find the limit.

Problem

Show that

$$\sqrt{2},\ \sqrt{2\sqrt{2}},\ \sqrt{2\sqrt{2\sqrt{2}}},\ \ldots$$

converges and find the limit.

Problem

Let $x_1 = 2$, and define

$$x_{n+1} = \frac{1}{2}\left(x_n + \frac{2}{x_n}\right).$$

1. Show that x_n^2 is always greater than 2, and then use this to prove that $x_n - x_{n+1} \geq 0$. Conclude that $\lim x_n = \sqrt{2}$.
2. Modify the sequence (x_n) so that it converges to $\sqrt{c}$.

Thank You!

We'd love your questions and feedback.
